 Will be reviewed

8. What is the purpose of the len() function in Python? *

- ☒ a) Returns the length of a list or string
- ☐ b) Defines the length of a new list

 Will be reviewed

9. Which built-in function is used to check the type of an object in Python? *

- ☒ a) `type()`
- ☐ b) `check\_type()`

 Will be reviewed

10. What does the `break` statement do in Python? *

- ☒ Exits the current loop prematurely
- ☐ Exits the program

 Will be reviewed

11. How can you convert a string to an integer in Python? *

- ☒ a) `int(string)`

☐ b) ``str_to_int(string)``

 **Will be reviewed**

12. `print("Hello, " + "World!")` *

☒ Hello, World!

☐ HelloWorld!

 **Will be reviewed**

13. How do you define an empty list in Python? *

☐ a) `list()`

☒ b) `[]`

 **Will be reviewed**

14. How do you comment out a multi line in Python? *

☐ `/* Comment */`

☐ `# Comment #`

☒ None

 **Will be reviewed**

15. How do you remove duplicates from a list in Python? *

☒ ``list.unique()``

☐ ``list(set(list))``

 Will be reviewed

16. How do you declare a variable with a floating-point value in Python? *

☐ ``float x = 3.14``

☒ ``x = 3.14``

 Will be reviewed

17. Which of the following is used to check if a key exists in a Python dictionary? *

☐ a) ``key()`` in dictionary

☒ b) ``key in dictionary``

 Will be reviewed

18. How do you get the index of the first occurrence of a value in a list in Python? *

☒ a) ``list.index(value)``

☐ b) ``list.find(value)``

 Will be reviewed

19. In Python, what does the ``*args`` syntax in a function definition signify? *

☒ a) It allows the function to receive any number of arguments

☐ b) It defines a required argument in the function

 Will be reviewed

20. What is the purpose of the `range()` function in Python? *

☒ a) Generates a list of numbers

☐ b) Defines a range for loop iteration

 Will be reviewed

21. Which of the following is used to represent a comment block in Python? *

☒ c) `''' ... '''`

☐ d) `# ... #`

 Will be reviewed

22. In Python, what is the purpose of the try and except blocks in exception handling? *

☒ a) The try block is used to catch exceptions, and the except block is used to raise exceptions.

☐ b) The try block is used to raise exceptions, and the except block is used to catch exceptions.

 Will be reviewed

23. How can you convert a string to lowercase in Python? *

☐ ``lowercase(string)``

☒ ``string.lower()``

 Will be reviewed

24. How can you concatenate two dictionaries in Python? *

☐ ``dict1 + dict2``

☒ ``dict1.update(dict2)``

 Will be reviewed

25. How do you comment out a single line in Python? *

☐ // Comment

☒ # Comment

 Will be reviewed

26. What is the purpose of the `enumerate()` function in Python? *

☐ a) Iterates over a sequence of numbers

☒ b) Adds index numbers to an iterable

 Will be reviewed

27. What does the `pop()` method do in Python when used with a list? *

☒ a) Removes the last element from the list and returns it

☐ b) Adds an element to the end of the list

 Will be reviewed

28. In Python, what does the term "unpacking" refer to? *

☒ a) Decomposing a tuple or list into individual elements

☐ b) Creating a compressed file

 Will be reviewed

29. How do you round a floating-point number to a specified number of decimal places in Python? *

☒ ``round(x, decimal_places)``

☐ ``x.round(decimal_places)``

 **Will be reviewed**

30. **How do you remove the last item from a list in Python? ***

☒ c) ``list.pop()``

☐ d) ``list.delete(-1)``

 **Will be reviewed**

31. **Which of the following is a mutable data type in Python? ***

☐ c) tuple

☒ d) list

 **Will be reviewed**

32. **How do you remove all elements from a list in Python? ***

☒ a) ``list.remove_all()``

☐ b) ``list.clear()``

 **Will be reviewed**

33. **In Python, what does the term "list comprehension" refer to? ***

☒ a) A way to create lists using loops

☐ b) A list that contains only integers

 Will be reviewed

34. Which statement is used to raise an exception in Python? *

- ☒ a) ``raise Exception("Error")``
- ☐ b) ``throw Exception("Error")``

 Will be reviewed

35. Which of the following is a valid variable name in Python? *

- ☐ 1_variable
- ☒ _my_variable
- ☐ variable#1

 Will be reviewed

36. How do you round a floating-point number ``x`` to the nearest integer in Python? *

- ☒ a) ``round(x)``
- ☐ b) ``ceil(x)``

 Will be reviewed

37. How do you swap the values of two variables in Python without using a temporary variable? *

- ☒ a) ``x, y = y, x``
- ☐ b) ``x = y; y = x``
