

1. Python is ____ Language
 - a. Compiled.
 - b. **Interpreted.**
2. In python everything is an _____.
 - a. Variable.
 - b. Class.
 - c. **Object.**
3. Using python3 what the output of print("Hello, World")
 - a. SyntaxError: invalid syntax
 - b. **Hello, World**
4. Using python2 what the output of print("Hello, World")
 - a. SyntaxError: invalid syntax
 - b. **Hello, World**
5. Using python3 what the output of print "Hello, World"
 - a. **SyntaxError: invalid syntax**
 - b. Hello, World
6. Python identifiers can Contain Punctuations Characters
 - a. True
 - b. **False**
7. Python identifiers can Contain digits
 - a. **True**
 - b. False
8. Python identifiers can Contain ' _ '
 - a. **True**
 - b. False
9. Python is Case Sensitive Language
 - a. **True**
 - b. False
10. A Python identifier doesn't be one of these words
 - a. **Else**
 - b. Name
 - c. Grade
11. A Python identifier can contain reserved words
 - a. True
 - b. **False**

12. Choose error type in the following code

```
Level 1
|
|   Level 2
|   |
|   |   if True:
|   |       print("Hello, World")
|   |   else:
|   |       print("Bye, World")
|   |
```

- a. Exception
 - b. Syntax Error
 - c. **Line Indentations**
13. Used to multi line string
- a. " "
 - b. ' '
 - c. **""" """**
14. Used to single line comment
- a. ''' '''
 - b. ' '
 - c. **#**
15. Used to multiple line comment
- a. **''' '''**
 - b. ' '
 - c. #
16. Which of The following are some examples of invalid identifiers:
- a. wordCount
 - b. y_axis
 - c. _logFile
 - d. **won't_work**
17. function used to get variable type
- a. list(var)
 - b. print(var)
 - c. **type(var)**
18. function used to convert to string
- a. int(age)
 - b. float(age)
 - c. **str(age)**
19. function used to convert to intager
- a. **int(age)**
 - b. float(age)
 - c. str(age)

20. function used to convert to float

- a. `int(age)`
- b. `float(age)`
- c. `str(age)`

21. output of `16%5` is ____

- a. 3.5
- b. 3
- c. 1

22. output of `16 // 5` is ____

- a. 3.5
- b. 3
- c. 1

23. output of `x=4 , x **= 4` is ____

- a. 4
- b. 16
- c. 32

24. Which used for return True if a not equals

- a. `==`
- b. `>=`
- c. `<=`
- d. `!=`

25. Which used for return True if a equals b

- a. `==`
- b. `>=`
- c. `<=`

26. Output of True and False

- a. True
- b. False

27. Output of True or False

- a. True
- b. False

28. Output of `not (True == 2)`

- a. True
- b. False

29. Which of the following is Falsy Values

- a. `''`
- b. `'asd'`
- c. 1
- d. 1.2

30. Out put of fullName = "Mohamed " + name * 3 + " Ali";

- a. Mohamed Ahmed Ali
- b. Mohamed Ahmed Ahmed Ahmed Ali
- c. Mohamed Ahmed Ahmed Ali

31. Value of intro

```
intro = "My Name is {0}"
```

```
intro.format('Ahmed')
```

- a. My Name is Ahmed
- b. My Name is {0}

32. Output of round(4.4) is

- a. 4
- b. 5
- c. 4.4

33. Output of round(4.6) is

- a. 4
- b. 5
- c. 4.4

34. Output of min(4.4,5,16) is

- a. 5
- b. 4.4
- c. 16

35. Output of max(4.4,5,16) is

- a. 5
- b. 4.4
- c. 16

36. In list you don't need to specify a particular data type or length.

- a. True
- b. false

37. you have newList = [1, "hi", True] what the output of newList[3]

- a. 1
- b. "hi"
- c. True
- d. Index Error

38. you have newList = [1, "hi", True] what the output of newList[0]

- a. 1
- b. "hi"
- c. True
- d. Index Error

39. You have `myList = ["C", "JavaScript", "Python", "Java", "php"]`; what the output of `print(myList.pop(4))`
- a. `php`
 - b. `C`
 - c. `Java`
 - d. `javascript`
40. python advanced datatype Same as Lists but Tuples are immutable
- a. Dictionary
 - b. `tuple`
41. 'tuple' object does not support item assignment
- a. `true`
 - b. `false`
42. output of `len((1, 2, 3))` is
- a. `3`
 - b. `2`
43. Which of the following is a key: value comma separated elements Data Structure
- a. List
 - b. Tuple
 - c. `Dictionary`
44. To get dictionary keys which method of the following is used
- a. `Keys`
 - b. `Items`
 - c. `update`
45. To check if dictionary has this key which method of the following is used
- a. `Keys`
 - b. `has_key(key)`
 - c. `update`
46. Which of the following is a function that takes a function and a sequence and returns to you the result of applying the function to each item in the original sequence?
- a. `Map()`
 - b. `Min()`
 - c. `Max()`
47. Which if statement is correct?
- a.

```
if (UserName=="Bob"):
    print "Greetings, Bob"
```
 - b.

```
if (UserName=="Bob")
    print "Greetings, Bob"
```

c. `if (UserName=="Bob"):`

`print "Greetings, Bob"`

48. Which allows you to logically organize your Python code? Grouping related code into a file makes the code easier to understand and use.

- a. Function
- b. **Module**
- c. file

49. function used to raise exception

- a. **`raise ErrorName(error_message)`**
- b. **`raise`**
- c. exception

50. File mode allow you to read and write

- a. R
- b. W
- c. **R+**
- d. Rb+

51. File mode allow you to read and write binary

- a. R
- b. W
- c. R+
- d. **Rb+**

52. package management system used to install and manage software packages written in Python

- a. **pip**
- b. python
- c. django-admin

53. output of `L = [ x**2 for x in range(10) if x%2 == 0 ]`

- a. **[0, 4, 16, 36, 64]**
- b. [0, 2, 18, 36, 64]

54. Function used to check if all items in an iterable are truthy value.

- a. **all**
- b. any

55. Function check if one item at least in an iterable is truthy value.

- a. all
- b. **any**

56. function to assign values to object properties

- a. **`__init__()`**
- b. Self
- c. Constructor

57. Parameter is a reference to the current instance of the class.
- a. Self
 - b. this
58. used to empty class definitions
- a. pass
 - b. self
59. to connect to mysql database you must install
- a. mysql-connector
 - b. sqlite-connector
 - c. not install any package
60. to connect to sqlite database you must install
- a. mysql-connector
 - b. sqlite-connector
 - c. not install any package
61. command used to create django project
- a. django-admin startproject projectname
 - b. python manage.py startapp library
62. command used to create django app
- a. django-admin startproject projectname
 - b. python manage.py startapp library
63. is a file that contain the configuration for all your project. It consists of some variables that have a value that affect on the project life style.
- a. settings.py
 - b. views.py
 - c. models.py
 - d. admin.py
64. is the single, definitive source of information about your data.
- a. settings.py
 - b. views.py
 - c. models.py
 - d. admin.py
65. which is responsible for creating new migrations based on the changes you have made to your models.
- a. Makemigrations
 - b. Sqlmigrate
 - c. migrate
66. which displays the SQL statements for a migration.
- a. Makemigrations
 - b. Sqlmigrate
 - c. Migrate

67. which is responsible for applying and unapplying migrations.
- a. Makemigrations
 - b. Sqlmigrate
 - c. **Migrate**
68. To used mysql db database ENGINE must be
- a. **django.db.backends.mysql**
 - b. django.db.backends.sqlite
 - c. none
69. To used sqlite db database ENGINE must be
- a. django.db.backends.mysql
 - b. **django.db.backends.sqlite**
 - c. none
70. To used mysql db database must provide username and password and host
- a. **true**
 - b. false
71. To used sqlite db database must provide username and password and host
- a. true
 - b. **false**
72. To used sqlite db database must provide.
- a. **filename**
 - b. username and password
73. which accept valid Email addresses only in model
- a. **EmailField**
 - b. URLField
 - c. CharField
 - d. TextField
74. which accept A large text field in model
- a. CharField
 - b. **TextField**
75. which accept valid urls only in model
- a. **URLField**
 - b. CharField
 - c. TextField
76. Which that automatically increments according to available IDs.
- a. **AutoField**
 - b. IntegerField
 - c. DecimalField

77. Which id A fixed-precision decimal number, represented in Python by a Decimal instance

- a. AutoField
- b. IntegerField
- c. **DecimalField**

78. accept True/False values only in model

- a. **BooleanField**
- b. IntegerField

79. Describe the many-to-one relationship

- a. **ForeignKey**
- b. ManyToManyField
- c. OneToOneField

80. Method used to save model object in database

- a. **Save()**
- b. Create()

81. Method used to insert model data in database

- a. Save()
- b. **Create()**

82. Method work as select * from tablename

- a. **modelname.objects.all()**
- b. modelname.objects.get()

83. Method *Retrieve single record, use get*

- a. modelname.objects.all()
- b. **modelname.objects.get()**

84. Method *filter the resulting QuerySet based on condition*

- a. All()
- b. **filter ()**
- c. Get()

85. Delete from database based on condition

- a. **modelname.objects.filter(last_name='Saeed').delete()**
- b. modelname.objects.delete()

86. Delete all from database

- a. modelname.objects.filter(last_name='Saeed').delete()
- b. **modelname.objects.delete()**

87. UPDATE age in database based on condition

- a. **modelname.objects.filter(last_name='Saeed').update(age = 19)**
- b. modelname.objects.update(age = 19)

88. UPDATE all age in from database

- a. modelname.objects.filter(last_name='Saeed').update(age = 19)
- b. **modelname.objects.update(age = 19)**

89. Perform Raw SQL

- a. Raw()
- b. All()
- c. Get()

90. Return the Host name of the request

- a. **get_host**
- b. is_ajax
- c. is_secure
- d. get_signed_cookie(key, salt="")

91. Return True if the request was made by https

- a. get_host
- b. is_ajax
- c. **is_secure**
- d. get_signed_cookie(key, salt="")

92. Get the value of the signed(with salt) cookie

- a. get_host
- b. is_ajax
- c. is_secure
- d. **get_signed_cookie(key, salt="")**

93. Return True if the request was made by XMLHttpRequest

- a. get_host
- b. **is_ajax**
- c. is_secure
- d. get_signed_cookie(key, salt="")

94. *in setting.py which variable Define the directories that the loader will search in*

- a. BACKEND
- b. **DIRS**
- c. APP_DIRS

95. *in setting.py which variable Define the static url*

- a. **STATIC_URL**
- b. STATICFILES_DIRS

96. *in setting.py which variable Define the static directory*

- a. STATIC_URL
- b. **STATICFILES_DIRS**

97. *in used to load all static file In template file*

- a. **{% load static %}**
- b. {% static "library/example.jpg" %}

98. *in used to define that asset in static*

- a. {% load static %}
- b. {% static "library/example.jpg" %}

99. *Django Framework provide developers with a fully functional admin panel. That can easily be integrated with your project business named*

- a. admin
- b. auth
- c. django

100. *command used to create superuser*

- a. python manage.py createsuperuser
- b. python manage.py user

101. *in Django Template Language which display variable from view*

- a. {{ variable_name }}
- b. {% tag_name %}
- c. {% extends %}

102. *Used for Template Inheritance*

- a. {{ variable_name }}
- b. {% tag_name %}
- c. {% extends %}

103. *Filters in Template*

- a. {{ variable_name }}
- b. {% tag_name %}
- c. {{ value | filter : options }}

104. *Output of value =3*

{{ value | add : 3 }}

- a. 3
- b. 6
- c. error

105. *Output of value =3*

{{ value + 3 }}

- a. 3
- b. 6
- c. 3+3

106. *Output of value =3*

{{ value }}+3

- a. **error**
 - b. 6
 - c. 3+3
- 107. *To redirect from view to another*
 - a. Render
 - b. Redirect
 - c. **HttpResponse**
- 108. *method to make a dynamic HTML Forms with its validation*
 - a. admin
 - b. **forms**
 - c. models
- 109. *Check if the Form valid or not*
 - a. **Form.is_bound()**
 - b. **Form.is_valid()**
 - c. **Form.errors**
- 110. *method to make the view run under specific conditions*
 - a. session framework
 - b. **Decorator**
- 111. *class-based Views that has a special purpose like listing & editing.*
 - a. **Generic Views**
 - b. Class-based Views
- 112. *lets you store and retrieve arbitrary data on a per-site-visitor basis. It stores data on the server side and abstracts the sending and receiving of cookies.*
 - a. session framework
 - b. **cookies**
 - c. Decorator
