7. الكود (قد تمت مراجعة بيانات الطالب ورقم الجلوس) * 

AKVB

 **Will be reviewed**

8. FIFO scheduling is 

- ☐ Fair-share scheduling
- ☐ Deadline scheduling
- ☒ Non-preemptive scheduling
- ☐ Preemptive scheduling

 **Will be reviewed**

9. Context switching is part of 

- ☐ Interrupt servicing
- ☒ Interrupt handling
- ☐ Polling

☐ Spooling

 **Will be reviewed**

10. executes must frequently and makes the fine-grained decision of which process to 

- ☐ execute the next.
- ☐ Long-term scheduling
- ☒ Medium-term scheduling
- ☐ Short-term scheduling
- ☐ None of the above

 **Will be reviewed**

11. With a page is brought into main memory only when the reference is made to a 

- ☐ location on that page.
- ☒ demand paging
- ☐ main paging
- ☐ prepaging
- ☐ postpaging

 **Will be reviewed**

12. Mutual exclusion means 

- ☐ process may hold allocated resources while waiting assignment.
- ☐ No resource can be forcibly removed from a process holding it.
- ☒ Only one process may use a resource at a time.
- ☐ Not mentioned

📝 Will be reviewed

13. Hold and wait means 

- ☒ A process may hold allocated resources while waiting assignment.
- ☐ No resource can be forcibly removed from a process holding it.
- ☐ Only one process may use a resource at a time.
- ☐ Not mentioned

📝 Will be reviewed

14. is the time required to move the disk arm to the required track 

- ☒ Seek time.
- ☐ Rotational delay
- ☐ Latency time
- ☐ Access time

📝 Will be reviewed

15. refers to a situation in which a process is ready to execute but is continuously denied access to a processor in deference to other processes 

- ☐ Synchronization
- ☐ Mutual Exclusion
- ☐ Dead lock
- ☒ Starvation

 **Will be reviewed**

16. Which of the following memory allocation schemes suffers from external fragmentation? 

- ☒ Segmentation
- ☐ Pure demand paging
- ☐ Swapping
- ☐ Paging

 **Will be reviewed**

17. Paging..... 

- ☒ solves the memory fragmentation problem.
- ☐ allows modular programming.
- ☐ allows structured programming.
- ☐ avoids deadlock.

 **Will be reviewed**

18. Safe state is..... 

- ☐ deadlock state
- ☒ non-deadlocked state
- ☐ polling state
- ☐ spooling state

 **Will be reviewed**

19. In memory management, a technique called paging, physical memory is broken into fixed sized blocks called..... 

- ☐ Pages
- ☒ Frames
- ☐ Blocks
- ☐ Segments

 **Will be reviewed**

20. The kernel keeps track of the state of each task by using a data structure called.....

- ☒ process control block
- ☐ user control block
- ☐ memory control block

☐ hardware control block

✉ **Will be reviewed**

21. is a high speed cache used to hold recently referenced page table entries a part of paged virtual memory? 

☒ Translation looks a side buffer

☐ Inverse page table

☐ Segmented page table

☐ Indexed page table

✉ **Will be reviewed**

22. A process is said to be in..... state if it was waiting for an event that will never occur 

☐ safe

☐ unsafe

☒ deadlock

✉ **Will be reviewed**

23. Scheduling is done so as to _____ 

☒ increase CPU utilization

☐ decrease CPU utilization

☐ keep the CPU more idle

☐ none of the mentioned

 **Will be reviewed**

24. A solution to the problem of indefinite blockage of low – priority processes is _____ 

☐ Starvation

☐ Wait queue

☐ Ready queue

☒ Aging

 **Will be reviewed**

25. Round robin scheduling falls under the category of _____ 

☐ Non-preemptive scheduling

☒ Preemptive scheduling

☐ None of the mentioned

 **Will be reviewed**

26. The real difficulty with SJF in short term scheduling is _____ 

☐ The searching time

☒ knowing the length of the next CPU request

☐ it is too complex

☐ none of the mentioned

 **Will be reviewed**

27. Consider the following set of processes, the length of the CPU burst time given in milliseconds. The processes are assumed to have arrived all at time 0, at order P1, P2, P3, P4.

Process	Burst time
P1	6
P2	8
P3	7
P4	3

Assuming the above process being scheduled with the SJF scheduling algorithm.

- ☒ The waiting time for process P1 is 3ms
- ☐ The waiting time for process P1 is 0ms
- ☐ The waiting time for process P1 is 16ms
- ☐ The waiting time for process P1 is 9ms

 **Will be reviewed**

28. There are five processes P1 to P5 to run. Their arrival times are 0, 1, 3, 9, and 11 milliseconds, respectively. Their burst times are 2, 3, 4, 2, and 6 milliseconds, respectively. What is the turnaround time of P5 using first come-first-served? 

- ☐ 0
- ☒ 6
- ☐ 9
- ☐ 11

☒ 17

 **Will be reviewed**

29. There are five processes P1 to P5 to run. Their arrival times are 0, 1, 3, 9, and 11 milliseconds, respectively. Their burst times are 2, 3, 4, 2, and 6 milliseconds, respectively. What is the waiting time of P5 using first come-first-served? 

☐ 0

☐ 6

☐ 9

☒ 11

☐ 17

 **Will be reviewed**

30. There are five processes P1 to P5 to run. Their arrival times are 0, 1, 3, 9, and 11 milliseconds, respectively. Their burst times are 2, 3, 4, 2, and 6 milliseconds, respectively. What is the waiting time of P5 using shortest-job-first? 

☐ 0

☐ 6

☐ 9

☒ 11

☐ 17

📝 Will be reviewed

31. Given a paged memory system with page size 1024, the page number of logical address 2100 is....., assume pages and page frames are numbered starting from zero 📝

☐ 0

☐ 1

(2100 / 1024 = 2 with remainder 52)

☒ 2

☐ 3

☐ 4

☐ 1024

☐ 1052

☐ 1076

☐ 2100

📝 Will be reviewed

32. Given a paged memory system with page size 1024, if logical address 2100 maps to frame 1 the physical address would be..... 📝

☐ 0

☐ 1

☐ 2

☐ 3

- ☐ 4
- ☐ 1024
- ☒ 1076
- ☐ 2100

☑ **Will be reviewed**

33. For a machine with 32-bit logical addresses and 4096-byte pages, the size of the offset part of a logical address is bits. 

- ☐ 8
- ☒ 12
- ☐ 16
- ☒ 20
- ☐ 32

☑ **Will be reviewed**

34. If a process must loop repeatedly, keeping the CPU occupied, to wait for a condition, that is called 

- ☐ starvation
- ☐ deadlock
- ☒ busy waiting
- ☐ mutual exclusion

 Will be reviewed

35. The number of processes completed per unit of time is a measure of 

- ☐ processor utilization
- ☐ predictability
- ☒ throughput
- ☐ fairness

 Will be reviewed

36. What would be the initial value of semaphore "S" when it is used for Mutual Exclusion: 

- ☐ -1
- ☐ 0
- ☒ 1
- ☐ 2

 Will be reviewed

37. A system is in a safe state only if there exists a _____ 

- ☐ safe allocation
- ☐ safe resource
- ☒ safe sequence

☐ all of the mentioned

 **Will be reviewed**

38. The address generated by the CPU is referred to as _____ 

- ☐ Physical address
- ☒ Logical address
- ☐ None of the mentioned

 **Will be reviewed**

39. Shifting the regions of memory allocated to processes, so that all the free memory forms one contiguous region is called..... 

- ☐ placement
- ☒ compaction
- ☐ internal fragmentation
- ☐ swapping

 **Will be reviewed**

40. What would be the initial value of semaphore "S" when it is used for resource allocation for five resources: 

- ☐ -1
- ☐ 0
- ☐ 1

 5 **Will be reviewed**

41. The first fit, best fit and worst fit are strategies to select a _____ 

- ☐ process from a queue to put in memory
- ☐ processor to run the next process
- ☒ free hole from a set of available holes
- ☐ all of the mentioned

 **Will be reviewed**

42. What is a long-term scheduler? 

- ☒ It selects processes which must be brought into the ready queue
- ☐ It selects processes which must be executed next and allocates CPU
- ☐ It selects processes which must be removed from memory by swapping
- ☐ None of the mentioned

 **Will be reviewed**

43. Suppose that a process is in "Blocked" state waiting for some I/O service. When the service is completed, it goes to the _____ 

- ☐ Running state
- ☒ Ready state

- ☐ Suspended state
- ☐ Terminated state

 **Will be reviewed**

44. When several processes access the same data concurrently and the outcome of the execution depends on the order in which the access takes place is called _____

- ☐ dynamic condition
- ☒ race condition
- ☐ essential condition
- ☐ critical condition

 **Will be reviewed**

45. Which of the following conditions must be satisfied to solve the critical section problem? 

- ☐ Mutual Exclusion
- ☐ Progress
- ☐ Bounded Waiting
- ☒ All of the mentioned

 **Will be reviewed**

46. Program always deals with _____ 

- ☒ logical address
- ☐ absolute address
- ☐ physical address
- ☐ relative address

✉ **Will be reviewed**

47. In internal fragmentation, memory is internal to a partition and _____ 

- ☐ is being used
- ☒ is not being used
- ☐ is always used
- ☐ none of the mentioned

✉ **Will be reviewed**

48. A small computer has 3 frames. A process makes the following list of page references: 1,2,3,4,2,1,5,6,7,6,3,2,1,2,3,6. How many page faults using FIFO algorithm? 

- ☐ 8
- ☐ 10
- ☒ 12
- ☐ 14
- ☐ None of the mentioned

☑ **Will be reviewed**

49. A small computer has 3 frames. A process makes the following list of page references: 1,2,3,4,2,1,5,6,7,6,3,2,1,2,3,6. How many page faults using least-recently-used (LRU) algorithm? 📖

☐ 8

☐ 10

☒ 12

☐ 14

☐ None of the mentioned

☑ **Will be reviewed**

50. A small computer has 3 frames. A process makes the following list of page references: 1,2,3,4,2,1,5,6,7,6,3,2,1,2,3,6. How many page faults using optimal page replacement algorithm? 📖

☐ 8

☒ 10

☐ 12

☐ 14

☐ None of the mentioned

☑ **Will be reviewed**

51. In virtual memory, a process may be larger than all main memory 📖

☒ True☐ False

✉ **Will be reviewed**

52. The condition where the system spends most of its time swapping data between main memory and secondary storage, to the extent that most of the CPU time is wasted waiting for the swapping device, is called thrashing. 

☐ True☒ False

✉ **Will be reviewed**

53. In the readers/writers problem, we want to allow a reader and a writer to be in their critical sections for the shared data at the same time. 

☐ True☒ False

✉ **Will be reviewed**

54. Entering a system call involves changing from user mode to kernel mode. 

☒ True☐ False

✉ **Will be reviewed**

55. A disadvantage of segmentation is that segment tables require a significant amount of space in memory. 

☒ True

☐ False

 **Will be reviewed**

56. The number of virtual pages is always identical to the number of physical pages.

☐ True

☒ False

 **Will be reviewed**

57. External fragmentation may occur with the fixed partitioning model of process memory management 

☐ True

☒ False
