

Formatted Questions & Answers

1. Which stage involves searching for existing components and systems that could fulfill the required functions?

Answer: System discovery and evaluation

2. Acceptance testing is done by:

Answer: Customers

3. Deliverables are typically defined as the working software delivered to the customer throughout different project iterations.

Answer: True

4. The main output of requirements specification activity is:

Answer: SRS: System requirements specification.

5. In which model is the system designed to accommodate future modifications?

Answer: XP Model: Extreme Programming

6. Developers adopt a reuse-oriented approach throughout the development process, regardless of the development model.

Answer: True

7. Software maintainability refers to software being understandable, usable, and compatible with other systems.

Answer: False

8. Once interface specifications are agreed upon, component developers can work independently without knowing the inner details of other components.

Answer: True

9. Which factors influence how process activities are carried out?

- Type of software
 - Experience of developers
 - Organization developing the software
-

10. A feasibility study is conducted to determine the software tools and number of programmers required to complete the software within budget and schedule.

Answer: True

11. SDLC is a set of related activities adopted in some form in software development, regardless of software size.

Answer: True

12. In which model does iteration happen within each development activity?

Answer: V Model

13. A company is developing control software for an anti-lock braking system that interfaces with special hydraulic hardware. Which model is best?

Answer: Waterfall model

14. In the software evolution phase, system assessment is performed to determine whether required changes are feasible.

Answer: True

15. In agile methods, new versions of software are typically delivered every:

Answer: 2–3 weeks

16. Agile methods focus on producing only the minimum required functionality while avoiding unnecessary complexity.

Answer: False

17. The design of the software is generally recorded informally on whiteboards and in programmers' notebooks.

Answer: False

18. Which of the following is *NOT* considered a stand-alone application system?

Answer: PayPal API

19. In the Waterfall model, the customer is involved throughout the entire development process.

Answer: False

20. Which of the following is *NOT* usually considered part of a software system?

Answer: Hardware Requirements
